Drawing dimensions in inches and (millimeters).

Tilt switches "make" when the electrode is tilted below horizontal and "break" when tilted above the horizontal. Total travel from "make" to "break" is the "Maximum included angle" shown below. The component to which the switch is attached must have a total tilt angle greater than the "Maximum included angle" for proper operation.

Must Make / Break Angle * :	Make to Break to Make 25° Max
Maximum included Angle:	
	* Make/break angles are electrode + (above) / - (below) 0° horizontal reference
